

# Git at Roche

Kieran Martin, Senior Principal Data Scientist, DSX

# Repository management/creation

Repositories are created under a **controlled group**

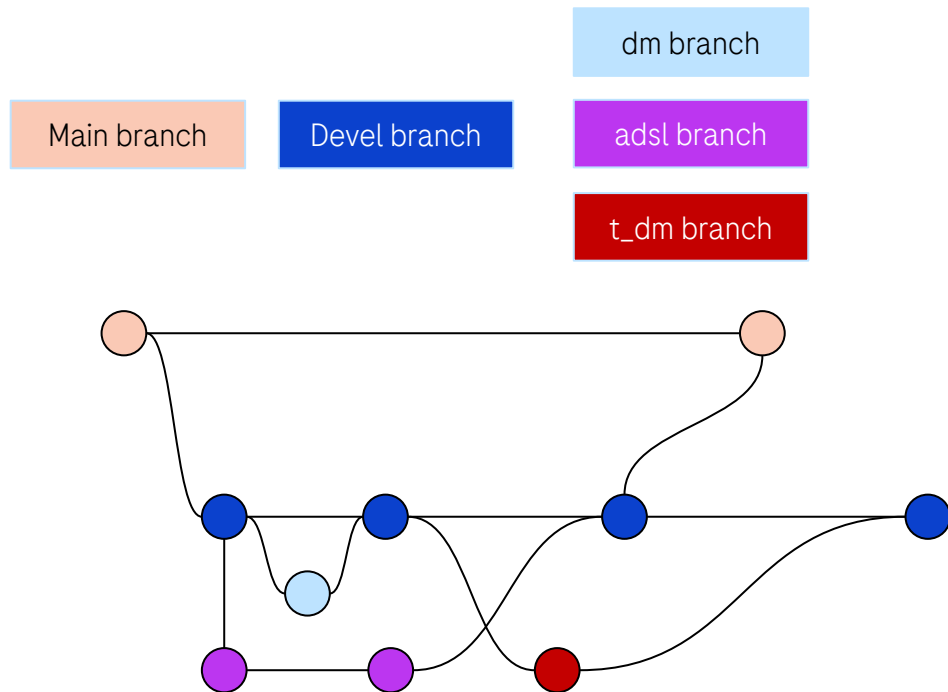

Code on gitlab is managed via git strategy (next slide)

Production runs are done by directly using code in controlled branch

Allows confidence in connection between code and what is delivered

# Git Strategy

Code and QC done on  
feature branches

Devel acts as a place to  
confirm code works together

Main is the production  
branch and the only place  
final results can be delivered  
from
